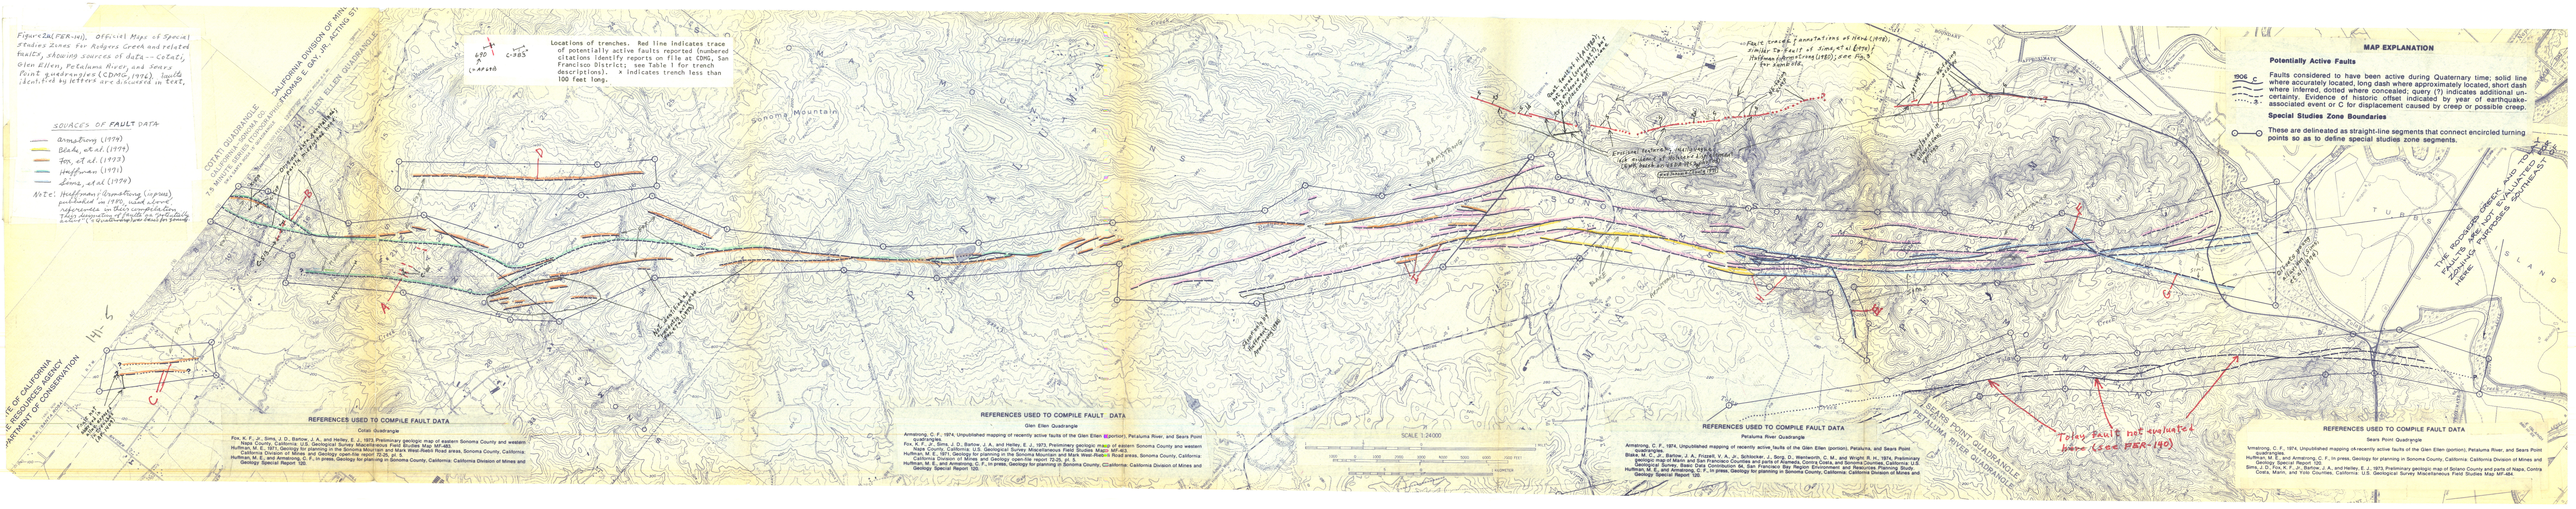
Figure 2A (FER-141). Official Maps of Special Studies Zones for Rodgers Creek and related faults, showing sources of data — Cotati, Glen Ellen, Petaluma River, and Sears Point quadrangles (CDMG, 1974). Faults identified by letters are discussed in text.

SOURCES OF FAULT DATA

- Armstrong (1979)
- Bishop, et al. (1979)
- Fox, et al. (1973)
- Huffman (1971)
- Sims, et al. (1974)

NOTE: Huffman / Armstrong (in press) published in 1980, used closest representation on their complete map. Their designation of faults as "potentially active" (Q Quaternary) has been omitted.


Locations of trenches. Red line indicates trace of potentially active faults reported (numbered citations identify reports on file at CDMG, San Francisco District; see Table 1 for trench descriptions). × indicates trench less than 100 feet long.
