
FER-156, FIGURE 2A. Faults mapped by other workers, Minden quadrangle. Where faults shown by the two references cited on this map coincide, the line symbols shown are those of Armin and John (1980), with notations describing the differences between the two maps. The faults depicted by other workers (Curtis (1951), and the many regional maps referred to in the text) are not shown since such maps in part have been generalized, appear less detailed than the data shown on this map, or generally duplicate (in a general way) the data shown hereon. Their fault symbols are dashed where inferred or approximately located; dotted where concealed; bar and ball on downthrown side.
